

# Quick Start for Data iPad

This iPad has been set up for live video visits. You do not need to connect to a Wi-Fi network, but will use Verizon Data to use most of the features and apps. If Verizon service is not available in your location, please connect to a Wi-Fi network.

To begin:

- Turn on device using button on the top right-hand edge of the device.
- Device password is: 1-2-3-4
- The status bar at the top of the screen should say “Verizon” and have a bar indicating the service status.
- Follow instructions given to you by your EI provider to connect to a live video visit app.
- If the platform you are using is not on the device, please contact your provider.

Quick Tips for participating in live video visits:

- Prop the iPad somewhere safe and steady for the session. It is difficult to see if the iPad is being moved or carried. The case includes a kickstand on the back for this purpose.
- Teletherapy sessions often include some observation of you playing with or completing a task with your child. They also often include some coaching or problem solving between the parent/caregiver and the EI provider/therapist.
- Feel free to ask your EI provider/therapist questions or let them know if there is something specific that you want to work on or need help with.
